*Network Administrator adept at Microsoft domain implementation and management with over 9+ years of experience. Expert in Microsoft Active Directory.*

## HIGHLIGHTS

Network configuration and support
Exceptional troubleshooter
Desktop and laptop expert
Active Directory

Sound judgment
Self-starter
IT security policies
Patch management

## ACCOMPLISHMENTS

Repaired more than 30 workstations and saved the Navy approximately 100,000 dollars by building, maintaining, and utilizing a database which detailed the status of all workstations and associated components allowing the quick identification of spare parts and facilitating the repair of more than 75% of all damaged laptops.

## PROFESSIONAL EXPERIENCE

October 2013 to May 2016
Navy Yokosuka, Kanagawa
Terminal Area Security Officer

Coordinated account creations and inventory management operations for over 300 users and $1.2M in computing hardware.
Assisted with the software and hardware migration from Windows XP to Windows 7 for over 200 workstations.
Coordinated the installation of and administered all local United States Battlefield Information Collection and Exploitation Systems (US BICES) assets.

February 2010 to October 2013
Navy USS La Jolla, HI
Network Administrator

Administered user accounts, domain policies, workstations, and servers across 6 separate domains and platforms (RHEL 5, HPUX 10.20, HBSS, W2k3, DNS, GPO, AD, File and Print, Exchange 5.5, MSSQL 2003, IIS 6)
Provided maintenance, troubleshooting, and disaster recovery services thereby maintaining 100% availability of network based services.
Implemented more than 200 patches and network configuration changes on two networks found to be more than two years delinquent on scheduled security updates.

## EDUCATION

2013 Advanced Network Analyst Damnek, VA
Training Network Analysis

U.S. Navy: Specialized training in the administration, maintenance, and repair of Navy network systems.

2013 Network Security Vulnerability Technician San Diego, CA
Training Network Security

U.S. Navy: Specialized training in the recognition of operating system vulnerabilities and performance of corrective actions to ensure maximum system availability.
